RUBRIC: Virtual Machine Setup (Ubuntu Desktop)

Activity: Create, Configure, and Install Ubuntu Desktop on a Virtual Machine

Total Points: 100

Criteria	Excellent (100%)	Proficient (75%)	Developing (50%)	Incomplete (0%)	Score
VM Type & Version (10 pts)	Correctly selects Ubuntu (64-bit) as the OS type and version. Matches the downloaded ISO architecture.	Selects correct type but wrong version (e.g., 32-bit instead of 64-bit) — VM still works.	Selects wrong OS type entirely (e.g., "Other Linux") — needs correction.	Fails to select any valid OS type; cannot proceed.	/10
Memory (RAM) Allocation (15 pts)	Allocates 4-8GB RAM as required. Understands the host system limitation.	Allocates 3GB – 3.5GB (sufficient but slightly below requirement).	Allocates 2GB or less — causes severe lag or installation failure.	Allocates no RAM or invalid value.	/15
Processor (CPU) Allocation (15 pts)	Allocates 4 CPU cores with 100% execution cap. Enables PAE/NX if available.	Allocates 2 cores but does not adjust execution cap or nested VT x settings.	Allocates only 1 core — installation takes extremely long.	Fails to configure processor settings.	/15

Hard Drive (Storage) Setup (20 pts)	Allocates 100 GB dynamically allocated storage (or fixed). Created a partitioning in drive.	Allocates 25GB but chooses wrong disk format (e.g., VHD) — still functional.	Allocates less than 20GB — insufficient for installation.	No hard drive created; VM cannot boot.	/20
ISO Attachment & Boot Order (15 pts)	Correctly attaches the Ubuntu Desktop ISO to the optical drive. Sets boot	Attaches ISO but forgets to adjust boot order — manually boots	Attaches ISO but boot order wrong — VM boots to blank screen.	Fails to attach ISO; VM cannot install.	/15

	order: Optical → Hard Disk .	via "Force BIOS" first time.			
Proper Installation Execution (25 pts)	Completes full installation: partitioning ("Erase disk"), user setup, timezone, keyboard. No errors. Reboots successfully into GUI.	Completes installation but makes minor errors (e.g., wrong timezone — fixes later).	Installation starts but fails midway (partitioning error, corrupt ISO, or power loss).	Installation not attempted or aborted.	/25

TOTAL SCORE: ____ / 100

DOCUMENTATION REQUIREMENT

Student Name: Princess Nicole B. Saulog

Date: August 26, 2026

VM Name: Saulog-VM

1. VM Specifications Summary

Component Allocated Value

VM Type / OS Ubuntu (64-bit)

RAM 4 GB (4096 MB) CPU Cores 4

Hard Drive Size 100 GB (Dynamic / Fixed) Storage

Controller SATA / SCSI

Network Adapter NAT / Bridged

ISO File Used C:\Users\COLLEGE STUDENT\Downloads\ubuntu-26.04-desktop-arm64.iso

2. Step-by-Step Setup Process

(Describe what you did, in order. Include commands used, if any.)

1. I opened the Oracle VM VirtualBox.
2. I added a new VM and named it "Saulog-VM".
3. After that, under ISO Image, I selected the Ubuntu Desktop and proceeded to change the VM settings.
4. I set the base memory to 4096MB, assigned 4 CPUs, and allocated 100GB for the virtual hard disk.
5. When everything was set, I clicked "Finish" and waited for the VM to open.
6. I started the Ubuntu installation process.
7. I proceeded through the installation, filled out the "Location" and "Create your account" sections, and reviewed my selected settings.
8. After completing the setup, I finalized the Ubuntu installation.
9. Finally, I opened the Terminal and took a screenshot. Then, I took a VM snapshot, named it with today's date, and entered "Desktop Setup" in the description.

3. Issues Encountered & Resolutions

(List any problems during setup and how you fixed them.)

Issue The UBUNTU desktop downloaded by the ICTC is corrupted.	Solution Borrowed flash drive from Joseph Del Rosario
---	---

4. Verification Screenshots

(Paste screenshots here or attach separately)

- VM Settings (Memory, CPU, Storage)

- ISO Attached / Boot Order

- Installation Progress

- Final Desktop with Terminal Open

I took a snapshot named "August 26, 2026" with a description "Set up of Desktop".
